

Name: _____

Date: _____

Cognitive Development

Across

4. First stage of cognitive development. Ages 0-2
5. Believed children primarily self-construct new knowledge from their experiences. Believed maturation is the primary way for cognition to advance.
7. A program that allows young children with and without disabilities to learn and play together.
10. In _____ play, children represent things through symbols and think of their world when not directly experiencing it.
11. This happens when new information refines or expands previous mental categories

Down

1. Piaget's fourth key assumption. Young children's ability to select objects, play with them, repeat actions on them and create a plan.
2. The number of stages of Piaget's theory of cognitive development.
3. The process of taking in new information and processing it
6. The ability to remember an object or person even though they cannot be seen, heard or touched
8. Abbr. The difference between what children can do on their own and what learning can be advanced with guidance
9. Believed knowledge is co-constructed with other learners (social) and can be advanced with guidance.
