

# Computer Memory Project

## Across

6. What is a computer disk drive that reads and writes data from optical disks through laser beaming technology? (7,4,5)
7. What type of memory stores data and machine code currently being used?(3)
8. a portable storage device that uses flash memory and is lightweight enough to attach to a key chain.(3)
9. A form of data storage that is non-volatile and easily altered or reprogrammed?(3)
10. Type of storage online but it is physically kept in multiple servers.(5,7)

## Down

1. A flash device that contains no mechanical parts?(5,5,4,5)
2. Type of disk storage composed of a disk of thin and flexible magnetic storage?(6,4)
3. The main memory in a computer?(7,7)
4. What type of storage device uses a magnetisation process to write, rewrite and access data?(8,4)
5. A non-volatile storage that is not directly accessed by the CPU?(9,7)
