

# Computing revision resource

## **Across**

- 2.** When a Hacker makes up a story and tricks people into giving them personal details
- 7.** Malware that encrypts data then demands money to unencrypt it
- 8.** Pop ups that will steal your data if you click on them
- 9.** A seemingly harmless piece of software that has malicious code inside
- 10.** When a hacker sends an email pretending to be a business gets you to click on a link so than can steal your details

## **Down**

- 1.** Paying someone to try and hack your network to see if its secure
- 3.** Looking over someones shoulder and watching them enter their password
- 4.** Passwords easily guessed by hackers
- 5.** Malware that monitors activity on a computer and sends it back to the hacker
- 6.** Software that replicates itself and gets passed onto another computer
