

# Cross it Up Geometry

## Across

4. Convex polygon that all sides and angles are congruent  
 8. Ratio of absolute error to the real measure  
 11. Two non collinear rays that have the same endpoint  
 12. A location on a plane  
 13. Common endpoint of 2 angles or more  
 14. Surface that has points on it  
 17. Measurement of smallest unit on a measuring tool  
 19. One endpoint and extends endlessly in one direction  
 20. Lie on the outside of an angle

21. Points that are located on the same line  
 22. Closed figure that sides are all segments  
 23. Two angles that measures equal 180  
 25. Has two endpoints

## Down

1. lie on the inside of an angle  
 2. pair of side by side angles with sides that are not common & have opposite rays  
 3. Method of creating geometric figures  
 5. two angles that are not side by side but intersect at one common point

6. Bisects a segment, line, or plane at its midpoint  
 7. Two angles that measures equal 90  
 9. ray that splits a angle into two congruent angles  
 10. Lines, segments, and rays that make a right angle  
 15. Point that divides segment into two  
 16. Has no boundary; three-dimensional  
 18. Sum of areas of each face of a solid  
 24. Line segment where each flat surface meets
