# Cyber Awareness

Across

3. What should be used to make passwords more secure?

5. Made possible by using algorithms to create complex codes out of simple data, effectively making it more difficult for cyber thieves to gain access to information

7. The fraudulent practice of sending emails purporting to be from reputable companies in order to induce individuals to reveal personal information, such as passwords and credit card numbers.

9. Used to protect a network or system from unauthorized access

10. A piece of code which is capable of copying itself and typically has a detrimental effect, such as corrupting the system or destroying data.

12. An attempt by hackers to damage or destroy a computer network or system.

13. Software that is specifically designed to disrupt, damage, or gain unauthorized access to a computer system.

Down

1. Combining form meaning "computer," "computer network," or "virtual reality."

2. A web address

4. Private or restricted information.

6. Software that enables a user to obtain covert information about another's computer activities by transmitting data covertly from their hard drive.

8. Someone who seeks and exploits weaknesses in a computer system or computer network.

11. An email message sent to a large number of people without their consent, usually promoting a product or service
