

Name: _____

Date: _____

Cybersecurity Awareness Month

Across

4. Abbreviation for a tool that allows the user to remain anonymous while using the internet by masking the location and encrypting traffic.
8. These programs protect your computer from Internet viruses or codes that can quickly disable your computer.
9. This software is installed on a network of computers without the owner's knowledge. It can monitor activities and pick up information like credit card numbers, usernames, and passwords.
10. These Internet scam programs often contact unsuspecting people via e-mail, urging them to visit fake websites designed to look like those run by well-known banks or other financial institutions.

Down

1. This type of harmful computer program can be easily installed on your computer while you're downloading unknown programs or files off the Internet.
2. The process of translating plaintext into ciphertext.
3. A hardware/software device or a software program that limits network traffic according to a set of rules of what access is and is not allowed or authorized.
5. A malicious application or script
6. Result in the loss of contact details if it were stolen
7. A bridge between two computer networks.
