

Cycles of Nature: The Water Cycle

Across

- 5. Location where the water would land the most
- 6. precipitation consisting of ice pellets, of
- 10. Golf ball sizes of ice that falls from the sky after precipitation
- 12. water held underground in the soil or in pores and crevices in rock.
- 13. Liquid acid falling from the sky
- 14. atmospheric water vapor frozen into ice crystals and falling in light white flakes or lying on the ground as a white layer

Down

- 1. movement of water through the atmosphere, specifically from over the oceans to over land
- 2. when warmth from the sun causes water from oceans, lakes, streams, ice and soils to rise into the air and turn into water vapour (gas).
- 3. when water (in the form of rain, snow, hail or sleet) falls from clouds in the sky.
- 4. This is when water vapour in the air cools down and turns back into liquid water.
- 15. Causes the water to evaporate

- 7. Water evaporates from off of plants and trees
- 8. Holds the water in the sky
- 9. the draining away of water (or substances carried in it) from the surface of an area of land, a building or structure, etc.
- 11. Forms in the clouds in order to hold
