# Data Collection: Blood Pressure & Abdomen

1. Factors affecting blood Pressure
  2. "Top number" of a blood pressure reading is termed
  3. "Bottom number" of a blood pressure is termed
  4. Elevated blood pressure is termed
  5. Decreased blood pressure is termed
  6. Classified as the strength of the blood pushing against the arteries
  7. Blood pressure is measured in
  8. This number refers to the amount of pressure in your arteries during contraction of the heart muscle
  9. This number refers to the heart relaxing or being inbetween beats
  10. increased blood pressure readings can lead to
  11. Where are bowel sounds auscultated?
  12. Normal bowel sounds
  13. Decreased bowel sounds is considered
  14. A large and firm abdomen is termed
  15. No bowel sound is termed
  16. Loud bowel sounds are considered
  17. How do you determine if a patient has pain in their abdomen
  18. Upon auscultation, if no bowel sounds are heard; this is an indication of
  19. Following X-ray confirmation, how do you determine correct placement of and NG tube
  20. how do you check residual of gastric contents when patient has NG, PEG or G-tube present
- A. hypoactive
  - B. draw back w/large syringe
  - C. Hypotension
  - D. systolic pressure
  - E. absent
  - F. Diastolic pressure
  - G. anxiety,fear,stress
  - H. millimeters of mercury mmHg
  - I. Hyperactive
  - J. 5-30 sounds/min
  - K. distention
  - L. Diastolic
  - M. bolus air while auscultating
  - N. Hypertension
  - O. 4 quadrants on abdomen
  - P. heart attack & stroke
  - Q. obstruction/ blockage
  - R. tenderness on palpation
  - S. systolic
  - T. Blood pressure
