

Dealing With Stains

Across

- 3.** Place the stain face down on a paper towel and apply nail polish remover to the back of the stain. Frequently replace paper towels, soaking up liquid. Repeat as needed and rinse with cold water.
- 6.** Sprinkle cornstarch on the spot to soak up the oil. Rinse with cool water; apply SHOUT and let sit for another 15 minutes.
- 8.** Flush the stain with white vinegar; apply a dish soap solution and let sit for 15 minutes.
- 10.** For ballpoint, create a dam of petroleum jelly around the stain to keep from spreading. With a clean toothbrush, apply rubbing alcohol and dab with mineral spirits in a well ventilated area. Dry and rinse with a dish soap solution.

- 11.** Stretch the fabric over a bowl and pour boiling water over the stain. If it had milk in it, follow with an oil solvent. If it contained sugar, treat with SHOUT; let sit for 30 minutes before washing.
- 12.** Scrape off excess; spray with a dish soap solution and dab with detergent.
- 13.** Scrape off excess, apply dish soap solution. Blot with a damp towel to remove residue. Apply white vinegar if stain persists.

Down

- 1.** Treat with SHOUT and let sit for 15 minutes. Rub in with a clean toothbrush.
- 2.** Use a cotton swab to apply rubbing alcohol to the stain. Blot with cotton ball. Repeat as needed.
- 4.** If a wet stain; soak in water and dab with ammonia. If dry stain; soak in salt water for a few hours; rinse and treat with ammonia mixture.

- 5.** Spritz stain with hairspray; let sit for 10 minutes. Wipe stain and residue with a damp cloth.
- 7.** Let stain dry and scrape off excess; rub a diluted WOOLITE solution until sudsy and rinse. If stain remains, apply a 1:1 vinegar-water solution to lighten.
- 9.** Treat with SHOUT. If stain remains, lighten by adding drops of white vinegar.
