# Drugs that interfere in Hemostasis

**Across**

- 2. Direct Factor Xa Inhibitor
- 4. anti-platelet drug that acts by an increase in cAMP
- 7. LMWH
- 9. Inhibits irreversibly P2Y platelet receptor
- 10. Recombinant form of endogenous protease tPA
- 11. Parenteral direct thrombin inhibitor

- 13. Heparin adverse effect

- 14. Co-factor in the synthesis of various coagulation factors
- 15. Vitamin K antagonist
- 16. Heparin antidote

- 5. Aminocaproic Acid

- 6. Inhibits irreversibly cyclooxygenase
- 8. Direct thrombin inhibitor
- 12. Test defective intrinsic coagulation pathway

**Down**

- 1. Anti-platelet drug that is a chimeric monoclonal antibody
- 3. Inhibits warfarin metabolism

**Word Bank**

- |              |            |               |              |
|--------------|------------|---------------|--------------|
| warfarin     | Alteplase  | Metronidazole | Dipyridamole |
| phytonadione | aPTT       | HIT           | Abciximab    |
| Enoxaparin   | Dabigatran | Apixaban      | Clopidogrel  |
| Antiplasmin  | Protamine  | aspirin       | argatroban   |
