

Earth Science

Across

3. The sphere that contains ice.

6. Temperature caused by a warm water current.

7. Part of water cycle where water vapor molecules combine.

8. The layer that contains the ozone.

9. Dating based on radioactive isotopes

11. The layer where weather happens.

12. Has convection currents that move tectonic plates

Down

1. What happens when a cold front moves into a warm air mass?

2. Dating based on rock layers.

4. The process of warm air rising and cold air falling.

5. solid layer at the earth's center (2 wds)

10. Caused by the deposition at the mouth of a river.
