

Earth Science Vocab

Across

- 3. The imaginary lines that go around the earth. (EX: 42° N)
- 6. When a plate rises due to convection currents or due to the collision of two plates.
- 12. A volcano that hasn't erupted for a long time.
- 13. When two plates slide past each other.
- 14. The theory of moving continents developed by Alfred Wegner
- 15. The edge of a plate.

16. A V-shaped rut in the ground

17. When a volcano has been determined to be not active anymore.

Down

- 1. The place where two plates meet
- 2. When two plates move apart.
- 4. A mountain-like formation that vents hot lava from inside the earth, commonly found around the "Ring of Fire".

5. These currents are caused by the cooling and re-heating of liquid magma under the earth's crust.

7. When two plates move together.

8. When one plate goes underneath another.

9. Anything having to do with the earth's crust.

10. The earth's crust is made of these.

11. The imaginary line dividing the earth in half running North to South.
