# Earth science

## Across

5. A mountain range found on the seafloor

8. A map marked with contour lines

13. A line on a map joining points of equal heights above/below sea level

14. The action of being compressed

17. The process of breaking down rock

18. A combined supercontinent formed of all tectonic plates combined into one big plate

19. A natural resource replenished naturally

20. A geological theory that the continents are changing their overall position

## Down

1. the process in which new oceanic plates are created at oceanic ridges

2. A location where two plates meet

3. An extended break of a body of rock

4. when two plates slide away from each other

6. A long narrow zone along which subduction took place

7. The principle in which in any sequence of sedimentary rock that has not

9. A ridge shaped fold of stratified rock

10. A mountain/hill that has a crater where lava spews out

11. An elastic wave caused by an earthquake

12. The north and south side of a magnet

15. A theory that the earth is divided into separate plates

16. Vibrations caused by the rupture and sudden movement of rocks along a break in Earth's crust
