

# Earth's Structure

## Across

2. forces that build up Earth's surface

7. thin layer of gases that make up Earth's outermost layer

10. densest part of Earth that includes the crust, mantle, and the cores

11. dark, fine-grained rock

12. usually light colored rock with coarse grains

13. portion of Earth that consists of water in lakes, oceans, rivers, etc.

## Down

1. forces that tear down Earth's surface

3. group of parts that work together as a whole

4. layer of rock that forms Earth's outer skin

5. part of earth that contains all living things

6. vibrations that travel through Earth

8. force pushing on a surface

9. ability to do work
