

Ecology

Across

- 1.** A group of organisms of one species that interbreed and live in the same place at the same time
- 6.** an individual animal, plant, or single-celled life form
- 11.** A factor created by a living thing or any living component within an environment in which the action of the organism affects the life of another organism
- 12.** Place where an organism or a biological population normally lives or occurs
- 14.** interaction between two different organisms living in close physical association typically to the advantage of both

- 15.** a large naturally occurring community of flora and fauna occupying a major habitat, forest or tundra

Down

- 2.** association between two organisms in which one benefits and the other derives neither benefit nor harm
- 3.** an animal that is hunted and killed by another for food
- 4.** relationship in which one organism benefits and the other is generally harmed
- 5.** a group of people living in the same place or having a particular characteristic in common

- 7.** are non-living chemical and physical parts of the environment that affect living organisms and the functioning of ecosystems

- 8.** a biological interaction where a predator feeds on its prey

- 9.** a biological community of interacting organisms and their physical environment

- 10.** the doctrine that mutual dependence is necessary to social well-being

- 13.** place in an ecosystem relative to the other organisms present
