# Ecology Review

## Across

5. An organism that cannot create its own food, but feeds on other organisms

6. A type of symbiosis where both organisms benefit

9. A place where an organism lives

10. A series of natural predator / prey interactions that begins with the sun.

11. An organism that is hunted for food.

12. An organism that produces food from the sun.

13. A type of symbiosis where one organism benefits and the other is neither harmed nor helped

14. The process by which autotrophs make food.

## Down

1. A type of symbiosis where one organism benefits and the other is harmed

2. Both producers and consumers use this to access energy from their food.

3. A type of oppositional relationship where one organism hunts and kills another.

4. An example of an oppositional relationship where one organism fights for limited resources

7. A relationship between two organisms where at least one organism benefits

8. A type of organism that breaks down dead matter
