

# Electric Circuits

## Across

2. the piece of wire that gives off light in a light bulb
6. a device that allows electricity to flow in only one direction
8. the ability to reduce the flow of electric
9. a circle in which an electric current flows
10. The flow of an electric charge
11. a form of energy that can give us light and heat.

## Down

1. An electric current moving from one place to another. It is caused when two objects rub against each other
3. A material in which electricity CAN flow
4. The piece of wire that gives off light in the light bulb
5. a circuit in which electric charges have only one path to flow through
7. a material in which an electric current CANNOT flow
