

# ELECTRICITY

## Across

2. The name for materials that do allow electricity to flow

3. A path for electrons to flow

7. Current that flows in 1 direction

9. The name for a material that does NOT allow electricity to flow

11. What nonmetal could conduct electricity (HINT: think of what you write with)

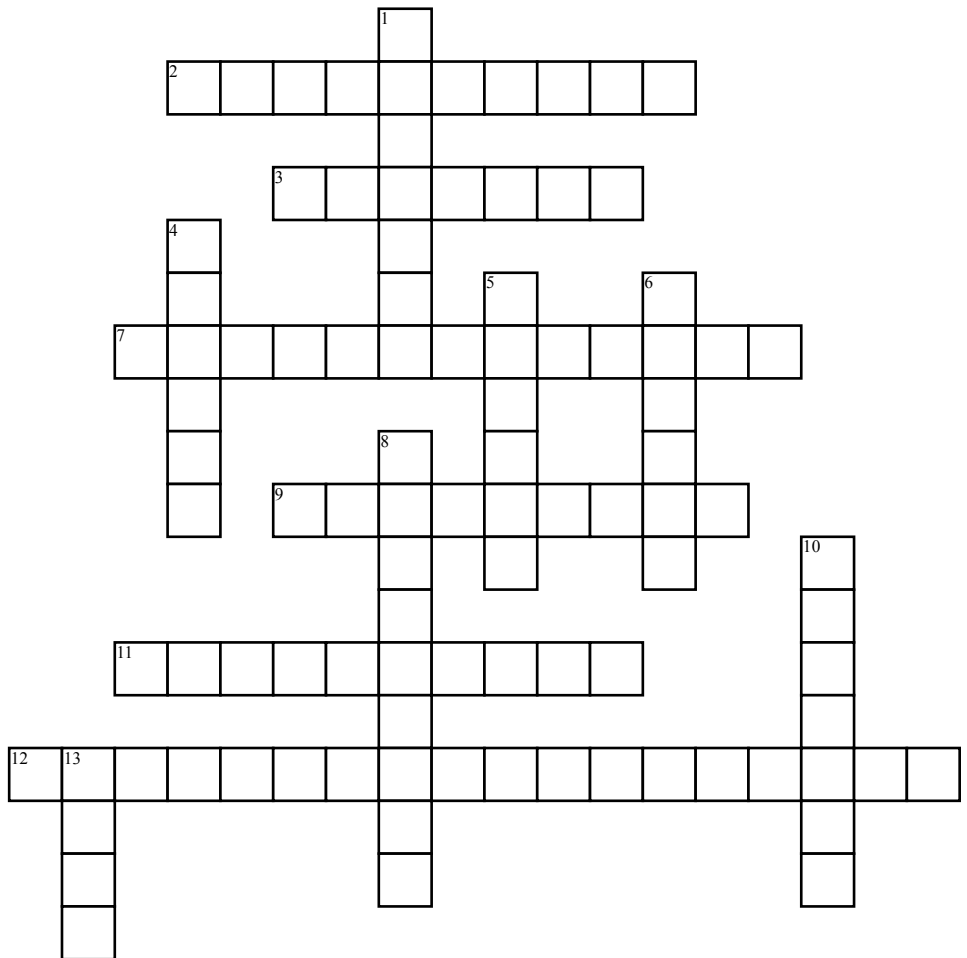

12. Current that flows in more than 1 direction

## Down

1. Flow of electrical charge

4. What can control the flow of electrons in a circuit?

5. How can you describe the flow of static electricity?

6. What type of material is good at allowing electricity to flow

8. The name for materials that do NOT allow electricity to flow

10. What was our power source for circuits in class?

13. What is a lightbulb an example of?
