

Endocrine System- A&P II

Across

- 1. One of the targets of FSH (plural)
- 4. Portion of the pituitary gland from which human growth hormone is released from.
- 6. The endocrine system is slower than the nervous system because it circulates through the:
- 10. What cells within the posterior pituitary never produce
- 13. A lack of this hormone can result in Addison's disease (Abbreviation).
- 14. Type of feedback that occurs when there is an excess of something in the body; tells the body to stop doing something
- 15. What ADH stimulates kidney tubule cells to reabsorb

- 17. The type of diabetes that occurs when there is a deficiency of ADH in the body
- 18. Hormone which is stimulated by gonadotropin releasing hormone (Abbreviation)
- 19. Full name of hormone that plays an important role in making breast feeding possible.
- 20. The anterior portion of the pituitary is predominantly:
- 21. Largest purely endocrine gland in the body

Down

- 2. What is ingested (besides water) to inhibit ADH?
- 3. ADH is released to combat

- 5. Part of brain that is stimulated to release oxytocin (among other hormones) from pituitary
- 7. Another name for Antidiuretic Hormone (ADH)
- 8. Portion of the pituitary gland that secretes human growth hormone.
- 9. An example of a mixed organ
- 11. Target of Adrenocorticotrophic hormone (gland)
- 12. Portion of Pituitary from which Oxytocin and Antidiuretic hormone is released from
- 16. Type of hormone which will trigger the release of another hormone
