

Energy Sources

Across

2. The colour that being environmentally friendly is associated with
5. Solar power, wind power, and hydro power
8. The dirtiest of all the fossil fuels
10. _____ panel
11. The burnable sources of fuel that are not fossil fuels
12. The most commonly used form of locomotion and energy

13. The process in which steam that comes out of the earth, spins turbines and creates electricity
14. The most dangerous mineral in all power plants and the most effective
15. The machine that converts wind power into electricity

Down

1. The machines that convert mechanical energy into electrical energy

3. Car fuel
4. The process in which the kinetic energy of falling water spins turbines to create electricity
6. Static _____
7. _____ spin axels, that then spin into generators that create energy
9. The structures in which hydropower plants are place in
