

Energy Unit

Across

- Occurs when thermal energy is transferred electromagnetic waves carry energy through empty spaces as well as matter
- an Energy that carried by Electromagnetic waves.
- an Energy that produce when a force cause an object or substance to vibrate that is transfer
- an Energy that thermal energy or heat, is the internal energy of substance
- an energy that change of energy from one form to another

Down

- BONUS** An energy cannot be created or destroyed but it can transformed from one forms to another form
- the movement of electrical changes
- an Energy that movement of objects and substance from one place to another
- Occurs when the particles in a material collab with neighboring particles
- Occurs when thermal energy is transferred by the movement of atoms or Molecules from one part of a material to another
