

Name: _____

Date: _____

Energy

Across

- 6. Stored energy
- 10. Resources that cannot be replenished as they are used; fossil fuels
- 13. Energy stored in the nucleus of an atom; released when nucleus splits or combines
- 14. Renewable and associated with water near oceans
- 15. Another name for light energy
- 16. Renewable energy produced from things once alive
- 17. Movement of electrons

18. Food, fuels, and batteries store this energy form

19. The ability to do work or cause change

20. In energy conversion, some energy is always converted into

21. Energy stored in bonds of atoms and molecules

Down

1. Thermal energy resulting from the heating of Earth's crust

2. Resources that can be replenished as they are used

3. Energy cannot be created, nor destroyed it changes from one form to another

4. An object's movement creates this energy

5. Produces radioactive wastes

7. Energy in motion

8. Energy depending on height

9. Plants perform photosynthesis and use sunlight to produce food, Light energy is converted to

11. The vibration and movement of molecules creates this energy

12. Energy created by vibration of waves through material
