

Energy and Electricity

Across

- 5. a material that permits electrons to flow freely from particle to particle
- 7. relating to or determined by the sun
- 9. a natural fuel such as coal or gas, formed in the geological past from the remains of living organisms (6 ,
- 10. the natural movement of the air

Down

- 1. path for transmitting electric current

- 2. a form of energy resulting from the existence of charged particles
- 3. power derived from the utilisation of physical or chemical resources
- 4. of a natural resource or source of energy that is not depleted by use
- 6. a machine for producing continuous power
- 8. supply (a device) with mechanical or electrical energy
