

# Environmental Science: Chapter 7

## Across

2. An area where biodiversity is very rich today, but is rapidly declining, is referred to as a biodiversity \_\_\_\_\_
4. A species found in only one small area of the globe is said to be \_\_\_\_\_ to that area.
7. Extinction occurs when the last surviving members of a species
8. Though it isn't a perfect solution, one way zoos can help threatened and endangered species is by promoting... (two words)

10. A species that is on the way to becoming endangered is said to be...

12. New biodiversity is constantly being made by this process
13. A way of talking about local extinction
14. Illegal hunting - a type of overharvesting responsible for the endangerment of a few species

## Down

1. The number or variety of species in a particular region (two words)
3. A species on the way to extinction is said to be...

5. Habitat change and loss is the greatest threat to biodiversity loss today, and it commonly begins with the \_\_\_\_\_ of species' habitats.

6. At the highest level of the taxonomic hierarchy
9. A type of biodiversity existing within species (two words)
11. A way for humans to help threatened and endangered species cope by connecting fragmented habitats through a wildlife \_\_\_\_\_
