

Erosion 6th grade science

Across

- 2. a mass movement that happens slowly
- 7. small, weathered particles
- 8. when wind, water, or ice drops sediment and rocks in a new location
- 9. when water combines with soil that produces an extremely heavy unstable area. It is fast moving
- 11. when a mass of snow along the side of a mountain becomes unstable

Down

- 1. when gravity is the primary force that moves rocks and sediment
- 3. when weathered material moves from one place to another
- 4. a mass movement that pulls at rocks and sediment and settles at the bottom of an incline
- 5. when huge slabs of rock break off along the side of a mountain
- 6. an area of sediment at the mouth of a river
- 10. the sediment that a stream carries
