

Escape Extinction With Protective Equipment

Across

- 3. Behaviour maintaining treatments rather than rapid ____ in behaviour
- 9. The investigation examined the use of an escape extinction procedure using ____ equipment
- 10. During treatment sessions, every instance of head hitting, the ____ was automatically applied and the client was redirected to complete demand
- 11. ____ extinction is no longer allowing an individual to avoid doing something non-preferred
- 13. ____ schedules consist of continuously representing the demand/instruction
- 14. ____ and treatment conditions were conducted in the classroom

15. Data was collected using a ____ second partial interval data sheet

16. ____ was defined as any hits from himself to his head or neck with an open hand, closed fist, or an object that would make an audible sound

Down

- 1. At baseline, tokens were delivered for appropriate behaviours on a variable ratio ____
- 2. a ____ analysis on head hitting was evaluated during demand command with a 10 minute duration
- 4. When the escape maintained SIB no longer interrupts the instructed demand, the ____ of the behaviour should decrease

5. The effects of escape extinction using protective equipment was evaluated using an ABABAB ____ design

6. head hitting could still occur, but the ____ of injury decreased with the helmet on

7. Self-Injurious ____ presents a significant risk to one self and to those responsible for handling it

8. ____ prompting and behaviour momentum was used to gain compliance through mastered demands

12. Subsequently, treatment remained in place for ____ months
