

# Final Review!!!

## Across

4. Measure serum lactate levels, obtain blood cultures before giving broad-spectrum antibiotics within the first 3 hours. These are measures of this bundle.
5. A benzodiazepine used to treat status epilepticus
7. This drug is nephrotoxic but can save your life if you have an infection. It rhymes with "bank oh, my sin". Tee hee hee.
8. This hormone is made by the kidneys in response to hypoxia.
9. Use this instead for infusions with blood or blood products, because the calcium in Ringers lactate causes clotting of the infusing blood.

10. This osmotic diuretic is used to reduce intracranial pressure and treat cerebral edema.

## Down

1. Light causes this vasodilator to degrade quickly, therefore it must be protected from light.
2. This radiation subtype is delivered from a source outside of the patient, therefore the patient is not hazardous to others.
3. Decreases in serum phosphorous levels cause increase in serum levels of this electrolyte, since they are inter-related.
6. Hypokalemia increases the risk of toxicity of this old school heart failure medication.
