

Forensic Science

Across

2. the sorting of fingerprints into file groups so that a file may be set upon the basis of fingerprints alone

8. stiffness of the body that sets in several hours after death

10. A computerized system, maintained by the FBI, that stores and compares millions of fingerprints and is used to find matches for identification purposes.

12. a chemical that produces color

13. can prove if death was accidental or foul play

14. the cooling of the body after death

15. study of insects

16. technique that measures the mass to charge ratio of charged particles

17. the study of the form and structure of organisms

Down

1. a method of separating chemicals to establish their quantities

3. fibers derived entirely from animal or plants

4. That period of time between death and embalming. The sooner embalming takes place the better results.

5. Fingerprints created when friction ridges deposit body perspiration and oil on surfaces they touch; typically invisible to the naked eye.

6. the elements that make up a substance

7. fiber created from natural materials or by chemical process

9. death color

11. the examination of a corpse to determine the cause of death
