

# Fossil Fuels and Alternative Energies

## Across

5. This Fossil Fuel is used for grills and a lot of power plants
6. This alternative energy uses big turbines to forward the energy
8. This fossil fuel is the kind you would pump into your car or power your stove with
10. This alternative energy is highly dangerous and is radioactive
11. How many years (in millions) approximately would it take for a fossil fuel to form

## Down

1. This alternative energy relies on the heat from the earth's core
2. This type of alternative energy requires a dam to collect water and turn into energy
3. This fossil fuel is dug out of the ground and common in Texas
4. This alternative energy relies on plants, and dead things to produce energy
7. This alternative energy collects energy from the sun
9. Trick Question: this isn't a fossil fuel but we will run out of it eventually
