

# Foundations Final

## Across

**3.** This is an advance directive form that helps you document \*personal, emotional, and spiritual needs\*. This form also allows you to document who you have chosen to make health decisions on your behalf if you are unable to make them yourself.

**5.** the involuntary spasm of the outer one third of the vaginal muscles, making penetration of the vagina painful and sometimes impossible

**7.** order is written to indicate that the goal of treatment is a comfortable dignified death and that further life-sustaining measures are not indicated

**8.** is the stiffening of the body that occurs about 2 to 4 hours after death. Starts in the involuntary muscles (Heart, bladder, and so on), then progresses to the head, neck, and trunk and finally reaches the extremities.

**9.** is the gradual decrease of the body's temperature after death. Body temp falls about 1°C (1.8 F) per hour until it reaches room temperature. Skin also loses elasticity and becomes more fragile.

**10.** pain during or immediately after intercourse

## Down

**1.** causes severe pain only on touch or attempted vaginal entry

**2.** a model used to help patients with altered sexual fx. At each level the nurse will provide additional guidance and info.

**4.** After blood circulation has ceased, the red blood cells break down, releasing hemoglobin, which discolors surrounding tissue. The discoloration appears in the lowermost or dependent areas of the body

**6.** is constant, unremitting burning that is localized to the vulva with an acute onset. The female has problems sitting, standing, and sleeping related to the intensity of pain.
