

Genetics

Across

- 2. the passing of a trait from parent to offspring
- 4. the likelihood of something to be true
- 8. when one allele for a specific trait that is not fully expressed
- 10. two alleles are the different in a specific gene
- 11. two alleles that are similar in a specific gene

- 12. a unit of heredity that is passed from parent to offspring
- 14. one or two genes that come from a parent offspring
- 15. an organism that has the same alleles in a trait.

Down

- 1. a form of dominance where both traits are expressed
- 3. a trait that is shown even if you only have one of the alleles

- 5. a diagram that is used to predict what trait an organism can have
- 6. the different set of alleles that an organism can have
- 7. a trait that is shown only if you have both of the alleles
- 9. the physical characteristics of a genotype
- 13. An organism that has 2 different alleles in a trait
