# Geography

Across

1. a triangle with all sides equal and all angles equal

4. a polygon having eight angles and eight sides

5. a closed plane curve consisting of all points at a given distance from a point within it called the center

7. an equilateral parallelogram having oblique angles

11. a quadrilateral having both pairs of opposite sides parallel to each other

14. the part of a straight line considered as originating at a point on the line and as extending in one direction from that point

15. a continuous extent of length

18. a parallelogram having four right angles

19. an angle less than 90 degrees but greater than 0 degrees

20. a rectangle having all four sides of equal length

Down

2. a straight line extending from the center of a circle or sphere to the circumference or surface

3. a triangle with one internal angle equal to 90 degrees

6. a triangle having three unequal sides and angles

8. a polygon with four sides

9. a 90 degree angle

10. a quadrilateral plane figure having two parallel and two nonparallel sides

12. one part of a line

13. a polygon having six sides and six angles

16. the intersection point of two sides of a plane figure

17. a polygon with 5 sides and 5 angles
