

Geography glossary

Across

- 4.** A type of erosion involving rock particles being scraped against, and wearing away, the surface of other rocks
- 5.** a place where people live
- 8.** the beginning of a river
- 10.** the point underground where the rock breaks and the energy of an earthquake is released
- 11.** the point on the Earth's surface directly above the focus of an earthquake
- 12.** the transport of sand in a hopping fashion in water or air

13. the transport of a soluble load in water

15. A type of erosion involving rock rock fragments being ground together to become smaller

Down

- 1.** where two tectonic plates move apart from each other and new crust is formed
- 2.** Where an oceanic plate slides underneath a continental plate
- 3.** the exact location of a settlement

6. a process of erosion involving water and air trapped in cracks and crevices

7. A sudden and violent shaking of the ground caused by tectonic movement.

9. the wearing away of land by material carried in rivers, glaciers, waves and wind

14. the location of a settlement in relation to the surrounding area
