# Geography prep

## Across

1. Where an oceanic plate slides underneath a continental plate or another oceanic plate
2. A process of erosion involving water and air trapped in cracks and crevices
3. The wearing away of land by material carried in rivers, glaciers, waves and wind
7. The exact location of a settlement
11. A type of erosion involving rock particles being scraped against, and wearing away, the surface of other rocks

12. A rise in population caused by a greater number of births than deaths

13. A sudden and violent shaking of the ground caused by tectonic movements

14. The average age which men and women may expect to reach in a particular country

15. Number of people living in a certain area eg km<sup>2</sup>

16. Where two tectonic plates move apart from each other and new crust is formed

## Down

4. The local climate of a small area eg a school

5. The point on the Earth's surface directly above the focus of an earthquake

6. A place where people live

8. The location of a settlement in relation to the surrounding area (its environs)

9. The point underground where the rocks breaks and the energy of an earthquake is released

10. A type of erosion involving rock fragments being ground together to become smaller, smoother and rounder
