# Geological time and rock layers

## Across

5. Rock formed from magma on earth's surface.

7. Remains/impression/trace of a former living thing.

9. Can not establish absolute age, but can tell which rock is older than the other.

10. One or a stack of originally flat and planar surfaces are bent or curved.

## Down

1. Fossil used for dating.

2. Place where erosion occurred.

3. Rock formed from magma that cools within the crust of the earth.

4. The process of determining an age on a specified time scale.

6. Relating to sediments.

8. When rock layers are split and moved.
