

Geometric Solids

Across

1. What type of solid has one base?
6. A line segment found on geometric solids
7. This geometric solid has no faces, edges or vertices
9. A geometric solid with one circular base
10. A prism with two three sided bases

13. The number of faces on a triangular pyramid

14. The number of vertices on a hexagonal pyramid

Down

2. A square prism with all six sides the same shape
3. The point, or corner, of a geometric solid

4. A geometric solid with two circular bases

5. A flat surface on a geometric solid

8. A pyramid with a five sided base

11. The number of edges on a square prism

12. What type of solid has two bases?
