

# Geometry

## **Across**

**2.** Another word for equal

**6.**  $\sim p \rightarrow \sim q$

**8.** The center of a plane figure

**9.** An angle that measures 90 degrees

**10.** a quadrilateral with only one pair of parallel sides

**12.** A line that splits an angle into two

**13.** An angle larger than 90 degrees

**16.** A shape with 6 sides

**18.** Find the distance between points A and B

**19.** A triangle with 3 unequal sides

**20.** The perimeter of a circle

## **Down**

**1.** If  $\sim q$  then  $\sim p$

**3.**  $p$  if and only if  $q$

**4.** Find the midpoint of the two points A(1, -3) and B(4, 5)

**5.**  $\perp$

**7.**  $- >$

**11.**  $\leftarrow \rightarrow$

**14.** Measured in unit squares

**15.** A pair of adjacent, supplementary angles that add up to 180 degrees

**17.** 4 congruent sides and 4 right angles
