# Geometry

## Across

- 1. A quadrilateral with only one pair of parallel sides
- 2. A quadrilateral that has opposite sides that are parallel and all of its sides are the same length
- 6. A polygon with 5 sides
- 12. A line segment; used to make up polygons
- 13. A polygon with 6 sides
- 14. A figure formed by two rays
- 15. Has 4 right angles (also a parallelogram)

- 16. Has 4 right angles and all sides are equal (also a parallelogram, rhombus, and rectangle)

- 17. Consists of two end points and all the points of the line between the end points
- 19. A polygon with 4 sides
- 20. A polygon with 8 sides

## Down

- 3. A tool used to measure angles
- 4. The point of intersection of two sides of an angle or figure

- 5. One endpoint and all the points of the line on one side of the end point
- 7. A polygon with 3 sides
- 8. The unit of measurement for measuring angles
- 9. A series of points that extends in two opposite directions
- 10. A closed plane figure made up of line segments
- 11. A location in space
- 18. A flat surface
