

# Geometry

## Across

**3.** Points that lie on the same plane

**5.** Congruent angles that are across from each other on intersecting lines

**9.** Two angles that share a common vertex and side

**12.** A line, ray, or segment that divides an angle or segment in two equal parts

**13.** The intersection of two rays at a common endpoint

**14.** A location with no size or shape

**15.** Two angles with measures that have a sum of  $90^\circ$

## Down

**1.** A flat surface made up of points that extends indefinitely in all directions

**2.** Two lines that intersect at a  $90^\circ$  angle

**4.** Made up of points with no thickness or width

**6.** A measurable part of a line consisting two endpoints

**7.** Points that lie on the same line

**8.** A line that extends indefinitely in one direction

**10.** Two angles with measures that have a sum of  $180^\circ$

**11.** Adjacent angles that are supplementary
