

Geometry

Across

- 4. Points that lie on the same plane
- 12. The common endpoint of an angle
- 14. Two angles with a measure that have the sum of 180
- 15. A parallelogram with four right angles, and the diagonals are congruent.
- 16. An angle with the degree measure of 90
- 17. Making a figure bigger
- 18. A comparison of two numbers by division

- 19. A parallelogram with four right angle, four congruent sides, diagonals are congruent, and angles are bisected.

20. Making a figure smaller

Down

- 1. Lines that are in the same plane and never meet
- 2. How much bigger or smaller the figures are compared to each other
- 3. Segments that have the same measure
- 5. A straight set of points with no thickness or width

- 6. A ray that divides an angle into two congruent angles
- 7. A measurable part of a line that consist of two endpoints and all the points between them
- 8. An angle with degree measure greater than 90 and less than 180
- 9. Description of lines that form right angles
- 10. A pair of adjacent angles where non-common sides are opposite rays
- 11. An enlargement or reduction of a figure
- 13. An angle with a degree measure less than 90
