

Geometry

Across

- 2. Angles on parallel lines cut by a transversal but in the exact same location.
- 3. A transformation that slides to a new position.
- 5. A triangle with one angle equal to 90°.
- 7. Two angles that add up to 90°.
- 8. Triangle with two equal sides.
- 12. Angles that are greater than 90°.
- 14. Angle outside the parallel lines and on opposite sides of the transversal.

15. Any reflection, rotation, translation, and dilations are all _____.

- 17. An obtuse _____ has one angle greater than 90°.
- 20. one angle that equals 180°.
- 21. Triangle with three equal sides.
- 22. Angles inside the parallel lines and on opposite sides of transversal.

Down

- 1. The only transformation that changes size.
- 4. Two angles that equal 180°.

- 6. A transformation of a figure that is flipped over a line or axis.
- 9. A transformation that moves clockwise or counterclockwise at 90° or 180°.
- 10. Angle that is less than 90°.
- 11. Angles that equal exactly 90°.
- 13. The line that cuts parallel lines at the same angle.
- 16. Angles that have the exact same measure.
- 18. A triangle with no equal sides.
- 19. An acute triangle has _____ angles less than 90°.
