

Geometry

Across

2. a line where points are on a line
 5. below 90 degrees
 12. separate two parts into two
 13. the x and y of a point
 14. left or right of something
 15. the line on a graph that goes up and down
 20. Equal to each other
 21. like a ruler but its side is used to measure things
 22. the middle of a segment
 25. 90 degrees
 26. a shape with a point at each corner and labeled a letter

27. the two endings of a segment
 28. line on a graph that goes left and right
 29. tool used to measure angles
 30. separate into two parts

Down

1. straight and extends both directions
 3. highest point
 4. above 90 degrees
 6. the original shape that is being changed or flipped
 7. the equation used to find the midpoint
 8. new coordinates of a shape

9. straight line with two endpoints
 10. complete 180 degrees
 11. points in the same plane
 16. pointing one direction with an arrow at one end
 17. used to draw circles
 18. divides an angle to two equal parts
 19. when you flip a shape across the x or y-axis
 23. the truth
 24. two rays
