

Geometry Crossword

Across

- 5. A triangle with two equal length sides (and two equal internal angles)
- 6. An angle that measures 90°
- 11. the mean of n numbers expressed as the n-th root of their product
- 13. Part of a line between two points
- 14. A triangle with all three sides of equal length (each internal angles = 60°)
- 15. A line segment (or length) joining two points on a circles circumference and passes through the circle's center (twice the length of the radius)

- 16. Point at which two line segments intersect (forming an angle)
- 17. Distance around a circle (the perimeter)
- 18. a polyhedron with two congruent and parallel faces
- 19. a point equidistant from the ends of a line or the extremities of a figure

Down

- 1. A triangle with all three sides with different lengths
- 2. Connects two points via the shortest path and continues indefinitely (forever) in both directions

- 3. Line Segments that intersect (cross) at an angle of 90°
- 4. Distance (line segment) from center of a circle to any point on that circle's circumference.
- 7. Line segments that never intersect (they are always the same distance apart)
- 8. relation with respect to comparative quantity or magnitude
- 9. An angle that measures more than 90°
- 10. An angle that measures less than 90°
- 12. A location in space - a dot on a piece of paper
