

Geometry: Lines, Angles, Triangles and Quadrilaterals

Across

2. The side opposite the right-angle in a triangle
 5. The size of an acute is less than?
 8. Both pairs of opposite sides are parallel
 10. Angles that add up to 90 degrees
 11. Triangles with two sides equal on length

12. A quadrilateral with the longest diagonal bisecting the shorter one
 13. Theorem associated with a right-angled triangle

Down

1. What should you add to obtain the size of the exterior angle of a triangle
 3. When parallel lines are cut by a transversal, these angles are supplementary

4. When two straight lines intersect, the vertically opposite angles are...
 6. WW. Three-hundred-and-sixty degrees
 7. A quadrilateral with one pair of opposite sides parallel
 9. An angle larger than 180 but less than 360 degrees
