

Geometry Terms

Across

- 3. What type of angle is greater than 90 degrees and less than 180 degrees?
- 6. a straight line passing from side to side through the center of a circle is called a _____
- 7. a plane figure with at least three straight sides and angles, and typically five or more is called what?
- 10. What has a four-sided plane rectilinear figure with opposite sides parallel?
- 12. a straight line from the center to the circumference of a circle or sphere is called a what?
- 14. What has an outline or surface curved like the exterior of a circle or sphere?

- 15. What round plane figure whose boundary consists of points equidistant from a fixed point?
- 16. What angle is 90 degrees as in a corner of a square or at the intersection of two perpendicular straight lines?
- 17. What part of a figure cut off by a line or plane intersecting it?
- 18. What has the longest side of a right triangle, opposite the right angle.
- 20. What shape has four sides and four right angles?

Down

- 1. What has a opposite equal acute angles, opposite equal obtuse angles, and four equal sides?

- 2. If the two lines are parallel, the corresponding angles are equal. what angle is that?
- 4. If each angular point of a polygon, polyhedron, or other figure is called a what?
- 5. What has the same angle?
- 8. What are the lines called when the two lines do not meet?
- 9. what shape has a quadrilateral with only one pair of parallel sides?
- 11. An _____ is an angle smaller than a right angle
- 13. What angle is 180 degrees?
- 19. A _____ is a line which starts at a point with given coordinates, and goes off in a particular direction to infinity, possibly through a second point.
