

Geometry Terms

GEOMETRY

Across

3. Two angles next to each other
 7. Two lines that will never cross
 10. Middle point.
 15. An angle that measures 180 degrees.
 16. A point where two angles meet.
 17. An angle that measures more than 90 but less than 180 degrees.
 18. Two angles where the sum is 180 degrees

19. Two angles with the sum of 90 degrees.

20. Two lines that form right angles that intersect.

Down

1. An angle that measures 180 degrees.

2. Two rays with a common end point.

4. A tool used for measuring angles

5. A line that goes up and down.

6. An angle that measures more than 180 but less than 360 degrees.

8. A line that goes from side to side

9. An angle that measures more than 0 but less than 90 degrees.

11. A unit used to measure an angle

12. A straight path that goes on infinitely.

13. A straight path with a beginning but NOT an ending.

14. A straight path with a beginning and a ending.
