Name: _____   Date: _____   Period: _____

Geometry Terms

Across

3. a triangle with all 3 angles acute

4. s a polygon that is equiangular

7. a straight line passing from side to side through the center of a body or figure, especially a circle or sphere.

10. segments that have the exact same length

12. two angles whose sum is 180˚

14. Lines that do not intersect

16. a quadrilateral with only one pair of parallel side

17. is the side of a right triangle that's opposite the 90-degree angle

18. a four sided plane rectilinear figure with opposite sides parallel.

20. A triangle with all three sides of equal length.

Down

1. each of the pairs of opposite angles made by two intersecting lines.

2. has 3 unequal sides

5. a triangle that has two sides of equal length.

6. a plane figure with four straight sides and four right angles, especially one with unequal adjacent sides, in contrast to a square.

8. plane figure with four equal straight sides and four right angles.

9. a four-sided figure.

11. is a line with a single endpoint that extends in one direction

13. a plane figure with at least three straight sides and angles, and typically five or more.

15. an angle of 90 degrees

19. a straight line from the center to the circumference of a circle or sphere.
