

Geometry Unit 1 Definitions

Across

1. A spot in space
4. A flat surface that extends forever
8. Made by 3 noncollinear points
11. A portion of a line with 2 endpoints
12. Segments that have the same length
13. Two rays which form a line
14. Points all in one line

15. Extends in opposite directions without end

16. Every point on a line can be paired with a real number

19. Distance from one endpoint to another

Down

2. Point(s) where two figures meet
3. Points or lines all in one plane
5. Set of all points

6. Point that divides a segment into 2 congruent segments

7. Segment, ray, line, or plane that intersects a segment at it's midpoint

9. Has 2 endpoints

10. An accepted statement of fact

17. Extends from one endpoint in one direction without end

18. Made by 2 points
