

Geometry Vocab

Across

3. the center

9. 90 angles

10. angles that sum comes to 90 degrees

11. when two lines are crossed by another line

12. neither parallel or intersecting

13. straight line segments

14. triangles are congruent if two pairs of corresponding angles are congruent

15. two lines that intersect and create 90 degrees

Down

1. congruent to hypotenuse and one leg of the other triangle, they are congruent

2. each pair of opposite angles made by two intersecting lines

4. three sides and has the same angles

5. angles that occupy the same relative position

6. a triangle that has three unequal sides

7. a pair of adjacent angles

8. the same thing but different setting

Word Bank

perpendicular lines

consecutive interior angles

converse

right triangle

polygon

vertical angles

corresponding angles

skew

angle side angle

linear angles

incenter of a triangle

scalene triangle

equilateral triangle

complementary angles

hypotenuse leg theorem
