

Geometry Vocabulary II

Across

- 5. Twelve-sided polygon
- 7. Another name for the origin of a ray; always named first in the notation; the arrow always points to the right.
- 8. One of the polygonal regions that form the surface of the polyhedron
- 10. Twelve-sided polyhedron
- 11. The set of all points on a line on a given side of a given side of a given point of the line.

Word Bank

- edge
- Equiangular polygon
- Half-plane
- Exterior of convex polygon
- dodecahedron

- 12. A convex polygon in which all angles have the same degree measure.
- 13. A subset of a plane consisting of all points on a given side of a line in the plane.

Down

- 1. The set of all planar points whose distance from the center is greater than the length of the radius.
- 2. The union of the exteriors of its angles.

- 3. A polygon in which all sides have the same length.
- 4. The complement of the union of the angle and its interior.
- 6. The intersection of adjacent faces of a polyhedron.
- 9. The line that separates the plane into two half-planes. The line is not part of either half-plane.

- Endpoint
- edge
- Exterior of an angle
- Half-line

- Exterior of circle
- Equilateral polygon
- Dodecagon
- Polyhedron face
